MRI is an imaging tool that uses magnetic fields and radio frequency waves. No ionizing radiation is used.

MRI is body part specific. Special pieces of equipment called "coils" act as antennas to receive information used to create an image. Each coil is usually specific to a body part. Examples would be a "knee coil", "head coil", "shoulder coil", etc..

Here at BSG we use the Siemens Magnetom C! Open MRI. We have tried to create a relaxed atmosphere in the scan room. A life size whitetail deer diorama and water feature create an "outdoors" feeling! We are making every effort possible to alleviate any anxiety that our patients might have towards a procedure.

All attempts have been made to ensure accurate data. Medical Imaging Resources, Inc. assumes no responsibility for any unintentional errors or omissions.
